Skills

User Research	Figma
Wireframing	Sketch
Prototyping	Notion
Usability Testing	FigJam
Interaction Design	HTML
Branding	CSS
UI design	Javascript

Hi there!

I am UX designer with a keen aspiration to become a user researcher. I bring a dynamic blend of passion, skills and academic prowess to the field.

With a year of experience in revitalising recruitment software interfaces, I have cultivated a detailed understanding of solving business challenges and user problems.

Additionally my experience in freelance work has allowed me to broaden my expertise and refine my ability to craft impactful solutions.

With a Bachelor's degree in Computer Science Engineering, my educational foundation provides a distinctive advantage in the UX landscape, aligning problem-solving methodologies intrinsic to engineering with the strategic thinking essential in UX design.

My experience in coding not only facilitates seamless collaboration with developers but also reinforces a holistic approach to problem-solving. Recognising that engineering and UX share a fundamental ethos of addressing complex issues, I leverage my technical acumen to bridge the gap between design and development, ensuring cohesive and effective implementation

When I'm not designing you can find me..

🎹 playing the piano or the guitar

🌈 writing a poem

✨ eating pasta

☕ on a chai (tea) break

🪴 day dreaming

🎶 singing or listening to music

🌊 at a sea shore or at a mountain top

Work - Projects
2022-2023

METAL
Redesigning the Applicant Tracking System
